

## 1812 Battery Container

# Packaging for new and used batteries

Batteries and especially vehicle batteries such as Lithium-Ion batteries are often classified as dangerous goods, this means that the packaging has to be UN-certified.

In a cooperation between Batteriretur, the leading battery recycler, and Wellplast AB the **1812 Battery Container** has been developed. A return packaging for transporting new and used medium sized Lithium Ion batteries. The box is stackable and also foldable to improve return ratio.

Approved for a number of different automotive batteries - UN-3480 ADR LP903 and LP904.

### Advantages:

- ✓ UN-approved for Li-Ion Batteries
- ✓ Return packaging
- ✓ Foldable
- ✓ Stackable
- ✓ Recyclable

**BatteriRetur** a part of **reneo**s

## Specifications

Raw material:	PEHD, PP with metal reinforcement
Size:	Externally: 1820*1220*730mm Internally: 1735*1135*540mm (400mm)
Size folded:	1820*1220*360 mm
Max. load:	371 kg
Max. stacking:	1538 kg
Fixation:	Strapping
Approval:	UN3480 LP903 and LP904 (LP904 requires fire retardant textile)
Recycling:	100% recyclable as PEHD, PP and metal
Option:	Class 1 fire approved textile inner packaging

## Characteristics

Flexibility - Foldable - Stackable
